

Stick Tea

The unique design of Stick Tea exalts one of the oldest ceremonies of the world: the preparation of loose tea. Designed with respect for tradition and exaltation of taste. Created with passion to innovate in practicality and to speed up the preparation.

You have purchased a product that combines a dazzling design with the excellent quality of tea and infusions it contains. Some useful tips:

Put the tea stick into a glass or a mug. Glass, unlike pottery, underlines the color of the infusion and allows the customer to set the intensity of the tea by turning the stick into hot water.

Pour hot tea on the stick tea. The ideal temperature is near boiling, around 90 degrees.

Serve the tea without turning the stick into the water and without the spoon. The customer can then decide on the desired intensity by himself.
